## MIIIRMTICS AT SCHOOL

## If your child is meeting the Mathematics Standard by the end of Year 5...

...they will be working at early curriculum level 3 , solving realistic problems using their growing understanding of number, algebra, geometry, measurement and statistics.

They will be solving problems involving several steps, for which they need to choose the most appropriate method to help them solve the problem. They will be learning a range of approaches to solving problems.

## To meet the standard your child will be learning to:

- choose an appropriate method to solve problems (using $+,-, x, \doteqdot$ ) and clearly explain their methods to other people
- use their known basic facts to work out unknown facts and to find fractions of sets, shapes and quantities
- sort 2D and 3D shapes and justify how they have been grouped
- use grid references on maps and points of the compass to describe the location of objects
- measure the size and capacity of objects
- explore the concept of chance by listing all of the possible outcomes
- investigate questions, show the information and discuss the data.

This is a small part of the skills and knowledge your child is learning in order to meet this standard. Talk to the teacher for more information about your child's learning.

## Focus on number

During Year 5, 50-70 percent of mathematics teaching time will focus on number learning.

Here is a map.
What things are at B4 and $\mathbf{C 2}$ on the map?

What is the location of the treasure?
The pirate wants to use his compass to get back to his ship. In what direction should he go?

At B4 there's a hut and at C2 a tree. The treasure is at G5. Using the compass I worked out the pirate needs to travel south-east to get to his ship.

Work together...
Help support your child's learning by building a good relationship with your child's teacher,
 finding out how your child is doing and working together to support their learning.

## MATHEMATICS

 E-Mathematics is an important part of Involve your child in:

## Talk together and have fun

 with numbers and patternsHelp your child to:
3 count forwards and backwards (starting with numbers like $10,098,10,099,10,100,10,101$, 10,102 then back again)
find and read large numbers in your environment e.g., nineteen thousand, three hundred and twenty-three
learn number pairs to 100 e.g., 81 and what equals 100 ?
read car number plates, look at the car's odometer to see how far you've gone
work out patterns - make codes from numbers.

For wet afternoons/school holidays/weekends

Being positive about mathematics is really important for your child's learning - even if you didn't enjoy it or do well at it yourself at school.
bake - follow a simple recipe (scones, pikelets)

*use blocks that fit together to make a model. Draw what it looks like from each side and above. Then draw what they think it looks like from underneath. Once finished, check the underneath of the real object against the drawing
make water balloons and see how far you could throw them (outside!!) and how far the water splatters
collect the family and whānau birthdays and put in order - make a reminder calendar for the year.

## Support your child...

As parents, family and whānau you play a big part in your child's learning every day, and you can support and build on what they learn at school too.
